DEVELOPMENT OF A MONOCULAR THREE-DIMENSIONAL SELF-CALIBRATING RECONSTRUCTION ALGORITHM BASED ON DIGITAL PHOTOGRAMMETRY

A thesis submitted in partial fulfillment of
the requirements for the degree of
Master of Engineering

by

NGUYEN TRUONG THO
NIM: 23606010
Faculty of Mechanical and Aerospace Engineering

2008

TABLE OF CONTENTS

Abstract **i**

Acknowledgments **iii**

Table of Contents **iv**

List of Figures **vi**

List of Tables **viii**

List of Symbols **ix**

Chapter 1: Introduction **1**

1.1 Overview 1

1.2 Problem statement 3

1.3 Research objectives 5

1.4 Methodology 6

1.5 Thesis outline 6

Chapter 2: Literature review **8**

2.1 Overview 8

2.2 Triangulation 11

2.3 Photogrammetry 16

2.4 Computer vision 17

2.5 Important contributions 20

Chapter 3: Fundamentals of three-dimensional reconstruction algorithm **30**

3.1 Camera model and Projection matrix 30

3.2 Epipolar geometry and Fundamental matrix 32

3.3 RANdom SAmple Consensus (RANSAC) algorithm 34

3.4 Detection of discontinuities - Harris corner detector 35
3.5 Data normalization 37
3.6 Projective depth estimation 37
3.7 Projective Shape and Motion by factorization of the measurement matrix 39
3.8 Auto-calibration 40
3.9 Bundle adjustment by Levenberg-Marquardt optimization . . . 43

Chapter 4: Three-dimensional reconstruction algorithm for a monocular camera sequence 46

4.1 Image acquisition 46
4.2 Three-dimensional reconstruction algorithm 47

Chapter 5: Error analysis 52

5.1 Normalization error 52
5.1.1 Torr's scalar multiplication algorithm 53
5.1.2 Hartley's transformation matrix algorithm 55
5.2 Error from RANSAC to estimate the epipolar geometry 55
5.3 Systematic (bias) error of the proposed algorithm with synthetic data 59

Chapter 6: Real scenes and results 64

Chapter 7: Conclusions and Recommendations 70

7.1 Conclusions 70
7.2 Recommendations 70

Bibliography 72

Curriculum Vitae 85

LIST OF FIGURES

1.1 Applications of three-dimensional measurement 4
1.2 Reconstruction with calibrated camera - Classical approaches . . 5

2.1 Hierarchy of the most important principles of non-contact 3-D shape measurements 10
2.2 Example of focus techniques 12
2.3 Active triangulation 13
2.4 Principle of passive triangulation 14
2.5 3-D measurement with theodolites 15
2.6 Shape from shading 16
2.7 Example of photogrammetric measurement 17
2.8 Relation between Computer vision and various other fields . . . 18
2.9 Example of multiple-view reconstruction 28
2.10 Reconstruction from single view 29

3.1 Pinhole camera model and related coordinate systems 31
3.2 Epipolar geometry 32
3.3 Harris corner detection 36
3.4 Principle of Hartley's normalization algorithm 38

4.1 Camera `Canon EOS 20D` and zoom lens `Canon EF28-135mm F3.5-5.6 IS USM` 47
4.2 The proposed versatile 3-D reconstruction algorithm 48
4.3 The proposed 3-D reconstruction algorithm chart 51

5.1 Synthetic image points 54
5.2 Five different scenes used in Hartley's normalization algorithm . 56
5.3 Average errors of `F` estimate vs. number of selected points . . . 57

5.4 Condition numbers vs. number of selected points, with and without normalization 58
5.5 Error generated by RANSAC to estimate the epipolar geometry compared to those of other methods 60
5.6 Example of RANSAC with image pair of Keble college (Oxford, UK) 61
5.7 Systematic error of the proposed algorithm 63

6.1 Sequence of 9 images of a $300 \times 250mm$ plate 65
6.2 Sequence of 6 images of a $550 \times 550mm$ wing surface 65
6.3 Point cloud of reconstructed plate with and without camera poses 66
6.4 Errors generated in each image of plate sequence 67
6.5 Point cloud of reconstructed wing surface with and without camera poses 68
6.6 Errors generated in each image of wing sequence 69

LIST OF TABLES

2.1 Comparison of several 3-D reconstruction methods 27

4.1 Specifications of the used camera and lens 47

5.1 First order error of the estimates of the fundamental matrix in terms of ζ for 10 sets of n synthetic correspondences 55

5.2 Systematic error of the algorithm itself by reprojection errors . . 62

6.1 Scene 1: Flat plate 67

6.2 Scene 2: Wing surface 68
